DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Von Ballmoos (US 4,103,150).

Von Ballmoos teaches an apparatus capable of automatically canceling a ticket, the apparatus comprising: a microprocessor unit 70 for controlling operation; an imaging means (34,35,50,55,65) for imaging the ticket; memory 71 for recording and storing data pertinent to the ticket; and receiving means 27,28 to transport the ticket to canceller 64, the canceller having radiant energy thermal pin 66 for permanently marking the ticket (see abstract, col. 2, lines 12-50, and figures 2 and 3).

The ticket 10 contains coded information in a first region 16 and second region 17, the second region containing thermographic material, the material also present within ticket layer 11 (col. 3, line 24-69). Once the ticket is inserted into the apparatus, the ticket's data is read and stored while the thermal means permanently marks the thermographic material on the card, thereby canceling or "voiding" the ticket.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Johnson et al. (US 5,109,153) teaches a cancellation device for voiding documents

by exposing articles with photosensitive materials thereon to radiant energy. Haas et al. (US 5,930,206) teaches tickets having thermal material that "self-cancels" at after a predetermined time period. Walters et al. (US 4,788,419) and Miller et al. (US 4,374,564) teach a terminal for canceling tickets using thermal means. Kusan (DE 3912901 A1) teaches canceling a ticket using a thermal print head.
